

→ INTEGRATED COMPETENCES FOR THE PHARMACEUTICAL INDUSTRY

CTP SYSTEM is the most important consulting group in Italy and one of the principal min Europe in the pharmaceutical, chemical and healthcare field.

CTP SYSTEM engages about 160 people with high professional profile and various qualifications (engineers, chemicals, biologists, computer scientists, etc.). CTP SYSTEM, with head-quarters in Poggibonsi (Siena), has also offices in Milan and Rome, and partnerships in France and USA. Besides the leader company CTP Tecnologie di Processo, the group is constituted by the laboratories CTP Lab (microbiological) and CTP Chem (chemical-physical), the foreign companies CTP Budapest and CTP Maghreb, and the partners Rigel, MED Farma and Latino America Consultores.

INTEGRATED SERVICES

The services offered range over from planning and project management to qualification and validation, from the support for the implementation of quality systems to the consultancy and validation of IT systems, from preventive maintenance to regulatory consultancy for Pharmaceutical Companies. The remarkable exper-

ience in the pharmaceutical and chemical-pharmaceutical field, the competence and the constant attention to the quality, are the principal force of CTP SYSTEM, a real partner in all the phases of project management, start-up and commissioning. In the pharmaceutical industry, the main problems regarding design, installation and routine operation are related to some technical specifications, better known by field specialists - rather than big engineering companies - able to integrate the GEP (Good Engineering Practices) with the GMP (Good Manufacturing Practices) know-how. The best solutions for projecting pharmaceutical facilities are combined with deep knowledge of regulations and a qualified engineering team.

ANALYTICAL AND FORMATIVE STRUCTURES

Through CTP Lab and CTP Chem, CTP SYSTEM offers integrated services for supporting Laboratories,

both of Quality Control for production and of Research & Development.

The services offered are turned to pharmaceutical, veterinary, cosmetics and food companies, in compliance with the GMP (Good Manufacturing Practices), GLP (Good Laboratory Practices) and GCP (Good Clinical Practices).

Through the GxP Training brand,

the company integrates its services with a complete formative proposal based on the clients needs, ensuring a service in accordance with the qualitative and normative requirements demanded by European and extra-European authorities.

GxP Training organizes three kinds of courses, according to end user's requirements: multiuser, personalized for companies and basic training.

A global system,
a perfect mechanism,
an organic approach.
CTP SYSTEM: the solution.
